

2,5-DIMETHOXY-4-(n)-PROPYLTHIOPHENETHYLAMINE (Street Names: 2C-T-7, Blue Mystic, T7, Beautiful, Tripstay, Tweety-Bird Mescaline)

Introduction: In the fall of 2000, a young healthy male died following snorting an excessive amount of 2C-T-7. Since this initial 2C-T-7-related death, two additional deaths reported in April 2001 have been linked to 2C-T-7. These two deaths resulted from the co-abuse of 2C-T-7 with MDMA.

Licit Uses: 2C-T-7 is not approved for marketing by the Food and Drug Administration and is not sold legally in the United States.

Illicit Uses: 2C-T-7 is abused orally and intranasally for its hallucinogenic effects. Information from a website about a variety of illicit drugs has suggested that 2C-T-7 produce effects similar to those of 2C-B. This information is based on individuals self-administering 2C-T-7 illicitly and self-reporting the effects. Its effects include visual hallucination, mood lifting, sense of well being, emotionality, volatility, increased appreciation of music, and psychedelic ideation. The oral and intranasal doses recommended on this website are 10-50 mg and 5-10 mg, respectively. 2C-T-7's onset and duration of actions are dependent upon the route of administration. Following oral administration, onset and duration of effects are 1 to 2.5 hours and 5 to 7 hours, respectively. After intranasal administration, the onset of action and duration of effects are 5 to 15 minutes and 2 to 4 hours, respectively.

User Population: Young adults are the main abusers of 2C-T-7.

Control Status: 2C-T-7 has been placed in Schedule I of the Controlled Substances Act of 1970.
